GLENTEK ALPHA SERIES DIGITAL PWM SERVO DRIVES MODELS: SMB9475 & SMC9475

Glentek's Alpha Series Digital PWM Servo Drives offer high performance DSP control of brushless (standard servo and highspeed spindle), brush type, rotary, linear, voice coil and AC induction motors. SMB/SMC9475 drives are designed for use with quadrature encoder feedback. For resolver feedback use the SMB/SMC9275. SMB/SMC9475 drives are offered as an AC powered (stand alone) package. These drives incorporate Field Oriented Control (FOC) and Space Vector Modulation (SVM) algorithms which provide optimum control that enable motors to run cooler and at higher velocities. Set-up, tuning and system diagnostics is accomplished using MotionMaestro (Glentek's Windows-based software).

Model	Logic Power
SMB	Bus Power Logic
SMC	24 VDC External Logic Power

			ELECTRICAL	RATINGS							
Maralal Normalian	Input '	Voltage	Continuous	Peak	Available Package Configurations						
Model Number	VDC	VAC	Current (A)	Current (A)	Module	Stand Alone	Multi-Axis				
SMB9475 SMC9475	N/A	110-130 208-240	75	120		•					

Command/Control Modes
+/-10 VDC typical for current (torque) or velocity (RPM)
Pulse (step) and direction
Encoder follower
External Sine commutation (2-phase current mode)
RS-232
PWM for current (torque) or velocity (RPM)
Camming/Gearing
Feedback
Incremental quadrature encoder
Digital Hall sensors or commutation tracks from encoder
Analog tachometer
I/O
Dedicated I/O: Analog signal command, +/- limits, inhibit/enable, fault,
reset, motor temperature, encoder and step & direction
Programmable analog out: 1 12-bit or optional 2 16-bit
General purpose relay: maximum 2 A @ 30 VDC. Nais P/N: TQSA-5V

FEATURES

	Performance
FOC	All Alpha Series employ Field Oriented Control method which allows accurate control in both
	steady state or transient operation, and optimal orientation of the magnetic field.
Space Vector Modulation	Glentek's advanced algorithms allow for maximum utilization of the DC bus voltage while generating minimum harmonic distortion of the currents in the winding of 3-phase AC motor.
Digital current loops	Current loop bandwidths up to 3 kHz.
Digitally tuned	All parameters set digitally. No potentiometers to adjust. DSP control for the ultimate in high performance.
Parametric filtering	Provides control engineers advanced filtering to eliminate unwanted system mechanical resonance.
Smart-Comm	
Initialization	Eliminates the need for Hall sensor or commutation tracks for many applications.
Auto Phase Advance	Plug and Play for all types of three phase brushless motors. Provides control engineers the ability to connect any motor to the drive's motor outputs. The drives smart algorithm will automatically find and align the motor phases to allow for the most optimized smoothness and efficient commutation.
Sinusoidal commutation	For the ultimate in efficiency and smooth motion, commutates from almost any resolution linear, rotary encoder, or Hall sensors only.
Fault protection	Short from output to output, short from output to ground, amplifier RMS over current, drive under/over voltage, amplifier over temperature, motor over temperature.
On-the-fly mode switching	This feature allows the drive to switch between any mode of operation on-the-fly. That is, the drive can switch between current to velocity (or velocity to current), current to position (or position to current), and velocity to position (or position to velocity) while the motor is in motion. This feature is available upon request. Please contact Glentek application engineers for assistance.
Software configurable	Glentek's Windows [™] based MotionMaestro© software provides ease of set-up, monitoring and tuning with no previous programming experience required. This software is Windows [™] 95/98/2000/XP, NT, Vista, 7, and 8 compatible.
Silent operation	25 kHz PWM standard.
	+/-10 VDC for current (torque) or velocity (RPM), pulse (step) and direction, encoder follower,
Command/control Modes	external Sine commutation (2-phase current mode), RS-232, RS-485, PWM for current (torque or velocity (RPM), and camming/gearing.
	Regulatory
RoHS compliance	RoHS compliance optional.
RoHS compliance RS-232 or RS-485	RoHS compliance optional. Connectivity High speed (115.2K baud) serial communication interface for setup and tuning and diagnostics. Note: RS-485 is optional.

	ENVIRONMENTAL CONDITIONS
Storage Temperature:	-40°C to 80°C
Operating Temperature:	Standard: 0°C to 40°C without current derating, up to 50°C with 25% current derating Special: -20°C to 40°C without current derating, up to 50°C with 25% current derating
	5% to 95% relative humidity, non-condensing
Altitude:	Up to 1000m without derating, derate current 10% per 1000m above 1000m

	DIMENSIONS
	Mounting Configurations
Stand Alone	This package consists of a drive module, DC bus power supply, in-rush current limiting protection at power-on, fuses, fans, and regen/clamp with a dumping resistor.

STAND ALONE MODEL NUMBERING

This section explains the model numbering system for Glentek's Alpha Series Digital PWM Brushless Servo Drives. The model numbering system is designed so that you, our customer, will be able to quickly and accurately create the model number for the drive that best suits your requirements. Please complete the drive configuration code you require using the information on this page. After completing your model number, please contact a Glentek Sales Engineer to confirm that the model number you have created is correct.

Stand Alone Package Configuration B = Stand Alone with Built In Regen Clamp
