# GLENTEK ALPHA SERIES DIGITAL PWM SERVO DRIVES MODELS: SMB/SMC 9515

Glentek's Alpha Series Digital PWM Servo Drives offer high performance DSP control of brushless (standard servo and highspeed spindle), brush type, rotary, linear, voice coil and AC induction motors. The 9515 (HP) can only be used for brushless type motors. SMB/SMC9515 drives are designed for use with quadrature encoder feedback (single board). For resolver feedback use the SMB/SMC9215. SMB/SMC9515 drives are offered as an DC powered (module, multi-axis) package. These drives incorporate Field Oriented Control (FOC) and Space Vector Modulation (SVM) algorithms which provide optimum control that enable motors to run cooler and at higher velocities. Set-up, tuning and system diagnostics is accomplished using MotionMaestro (Glentek's Windows-based software).

Model	Logic Power				
SMB	Bus Power Logic				
SMC	24 VDC External Logic Power				

ELECTRICAL RATINGS									
Model Number <sup>(2)</sup>	Input Voltage		Continuous	Peak	Available Package Configurations <sup>(2)</sup>				
Model Number ·-/	VDC	VAC	Current (A)	Current (A)	Module	<b>Stand Alone</b>	Multi-Axis		
SMB9515 (LP) SMC9515 (LP)	24-70 70-190 190-340	110-130	10	20	•		•		
SMB9515 (SP) SMC9515 (SP)	24-70 70-190 190-340	110-130	15	30	•		•		
SMB9515 (HP) SMC9515 (HP)	24-70 70-190 190-340	110-130	20	40	•		•		

Notes: <sup>(2)</sup> LP = Low Power, SP = Standard Power, HP = High Power <sup>(3)</sup> All Multi-Axis versions can be ordered for operation from either 110-130 VAC or 208 VAC

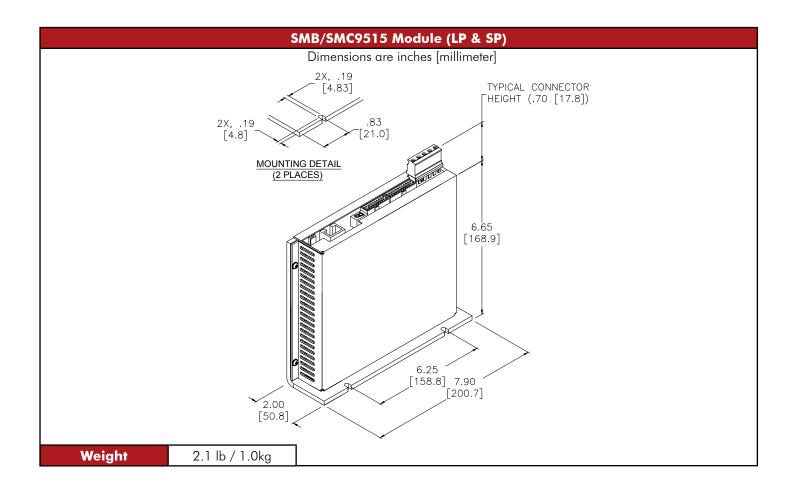

Command/Control Modes	Feedback
+/-10 VDC typical for current (torque) or velocity (RPM)	Incremental quadrature encoder
Pulse (step) and direction	Digital Hall sensors or commutation tracks from encoder
Encoder follower	Analog tachometer
External Sine commutation (2-phase current mode)	I/O
RS-232	Dedicated I/O: Analog signal command, +/- limits, inhibit/enable,
PWM for current (torque) or velocity (RPM)	fault, reset, motor temperature, encoder and step & direction
Camming/Gearing	Programmable analog out: 1 12-bit or optional 2 16-bit
	General purpose relay: maximum 2 A @ 30 VDC. Nais P/N:
	TQSA-5V

## **FEATURES**

	Performance
FOC	All Alpha Series employ Field Oriented Control method which allows accurate control in both
	steady state or transient operation, and optimal orientation of the magnetic field.
Space Vector	Glentek's advanced algorithms allow for maximum utilization of the DC bus voltage while
Modulation	generating minimum harmonic distortion of the currents in the winding of 3-phase AC motor.
Digital current loops	Current loop bandwidths up to 3 kHz.
Digitally tuned	All parameters set digitally. No potentiometers to adjust. DSP control for the ultimate in high performance.
Parametric filtering	Provides control engineers advanced filtering to eliminate unwanted system mechanical resonance.
Smart-Comm Initialization	Eliminates the need for Hall sensor or commutation tracks for many applications.
Auto Phase Advance	Plug and Play for all types of three phase brushless motors. Provides control engineers the ability to connect any motor to the drive's motor outputs. The drives smart algorithm will automatically find and align the motor phases to allow for the most optimized smoothness and efficient commutation.
Sinusoidal commutation	For the ultimate in efficiency and smooth motion, commutates from almost any resolution linear, rotary encoder, or Hall sensors only.
Fault protection	Short from output to output, short from output to ground, amplifier RMS over current, drive under/over voltage, amplifier over temperature, motor over temperature.
On-the-fly mode switching	This feature allows the drive to switch between any mode of operation on-the-fly. That is, the drive can switch between current to velocity (or velocity to current), current to position (or position to current), and velocity to position (or position to velocity) while the motor is in motion. This feature is available upon request. Please contact Glentek application engineers for assistance.
Software configurable	Glentek's Windows <sup>™</sup> based MotionMaestro© software provides ease of set-up, monitoring and tuning with no previous programming experience required. This software is Windows <sup>™</sup> 95/98/2000/XP, NT, Vista, 7, and 8 compatible.
Silent operation	25 kHz PWM standard.
Command/control Modes	+/-10 VDC for current (torque) or velocity (RPM), pulse (step) and direction, encoder follower, external Sine commutation (2-phase current mode), RS-232, RS-485, PWM for current (torque or velocity (RPM), and camming/gearing.
	Regulatory
ROHS compliance	ROHS compliance optional.
	Connectivity
RS-232 or RS-485	High speed (115.2K baud) serial communication interface for setup and tuning and diagnostics. Note: RS-485 is optional.
	Feedback
Encoder feedback	Accepts nominal encoder signals up to 5 MHz (maximum frequency of up to 10 MHz is possible,
Taraha maata wifa a dha a da	but is system dependent).
Tachometer feedback	Accepts analog signals from all types of tachometer feedback.
	Analog sig. command, +\- limits, inhibit/enable, fault, reset, motor temp, encoder and step &
Dedicated I/O	direction. Programmable analog out: 1 12-bit or optional 2 16-bit. General purpose relay: maximum 2 A @ 30 VDC. Nais P/N: TQSA-5V.
	Input
Wide operating voltage	24-340 VDC for drive modules.
	I INOTE: INON-STANDARD VOLTAGES CAN BE ORDERED ON REQUEST
Direct AC operation	Note: Non-standard voltages can be ordered on request. The multi-axis chassis include DC bus power supplies, cooling fans and a regen clamp with dumping register.
Direct AC operation External logic supply	The multi-axis chassis include DC bus power supplies, cooling fans and a regen clamp with dumping resistor. 24-48 VDC, 600 mA min @ 24 VDC powers all logic & encoder. This works as a "keep alive"

External logic supply Complete isolation Non-volatile memory	The multi-axis chassis include DC bus power supplies, cooling fans and a regen clamp with dumping resistor. 24-48 VDC, 600 mA min @ 24 VDC powers all logic & encoder. This works as a "keep alive" for the SMC9515 drives. Build Complete isolation between signal and power stage. All parameters are stored in non-volatile memory for reliable start up. In addition, up to four different configurations can be stored in the amplifier's non-volatile memory.
External logic supply Complete isolation Non-volatile memory Relay outputs	The multi-axis chassis include DC bus power supplies, cooling fans and a regen clamp with dumping resistor. 24-48 VDC, 600 mA min @ 24 VDC powers all logic & encoder. This works as a "keep alive" for the SMC9515 drives. <b>Build</b> Complete isolation between signal and power stage. All parameters are stored in non-volatile memory for reliable start up. In addition, up to four different configurations can be stored in the amplifier's non-volatile memory. Two pins provide an interface for the relay. They turn on when a desired condition occurs.
External logic supply Complete isolation Non-volatile memory	The multi-axis chassis include DC bus power supplies, cooling fans and a regen clamp with dumping resistor. 24-48 VDC, 600 mA min @ 24 VDC powers all logic & encoder. This works as a "keep alive" for the SMC9515 drives. Build Complete isolation between signal and power stage. All parameters are stored in non-volatile memory for reliable start up. In addition, up to four different configurations can be stored in the amplifier's non-volatile memory.

Storage Temperature: -40°C to 80°C
Operating Temperature: Standard: 0°C to 40°C without current derating, up to 50°C with 25% current derating Special: -20°C to 40°C without current derating, up to 50°C with 25% current derating
Humidity: 5% to 95% relative humidity, non-condensing
Altitude: Up to 1000m without derating, derate current 10% per 1000m above 1000m

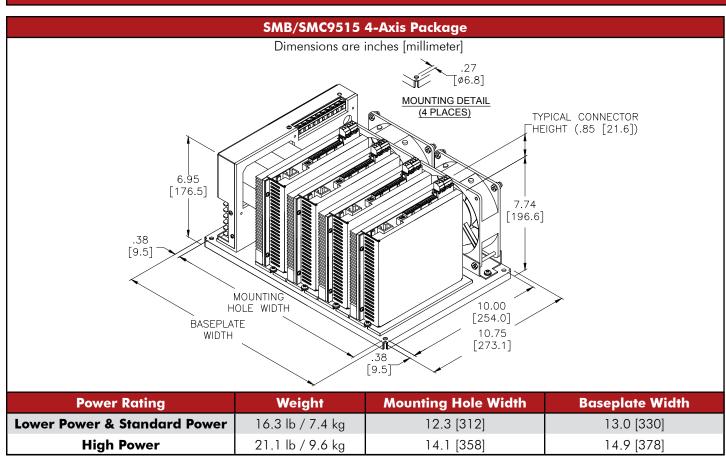

DIMENSIONS					
Mounting Configurations					
Module	This package consists of a drive module, without a DC bus power supply. This type of package is typically used for cost sensitive applications where the customer provides DC bus power supply, forced- air cooling and regen clamp or it can be integrated into a Glentek multi-axis package.				
Multi-Axis	This package consists of an open frame base plate chassis with DC bus power supply, regen clamp with dumping resistor, in-rush current limiting protection at power-on, fuses and cooling fans. Available in 2, 4 & 5 axis packages. This type of package is typically used for multi-axis applications.

## **MODULE MODEL NUMBERING**

This section explains the model numbering system for Glentek's Alpha Series Digital PWM Brushless Servo Drives. The model numbering system is designed so that you, our customer, will be able to quickly and accurately create the model number for the drive that best suits your requirements. Please complete the drive configuration code you require using the information on this page. After completing your model number, please contact a Glentek Sales Engineer to confirm that the model number you have created is correct.
